

School Safety Starter Package

A low cost, practical solution to HELP secure your school against the active shooter with Gunshot Detection

Would you send your children to a school without fire alarms?

Today the Department of Homeland Security, the National Fire Protection Association, and other authorities recognize that an active shooter alarm and alert system is critical to saving lives in an active shooter incident. School communities recognize the importance of prioritizing the safety and security of our schools, but how do you prioritize school security on a limited budget? With the **Guardian School Safety Starter Package**, a kit of five (5) Guardian gunshot detection sensors including software and first-year licensing for K-12 Schools.

What is Guardian?

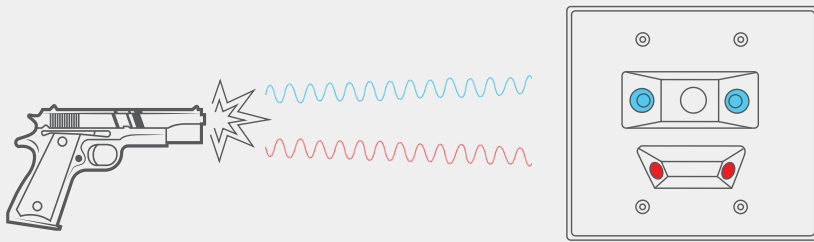

Guardian was built from gunshot detection technology credited with saving lives in military conflicts across the globe and Shooter Detection Systems has brought this technology home to secure our nation's schools against the active shooter threat. Guardian is a system of smart sensors that help detect gunfire in buildings and report that a shot has occurred within seconds. Guardian communicates gunshot incident details to those exposed to the threat in real-time, and is a "plug-and-play" system designed to work independently or integrate with your school's existing technologies.

The Guardian Indoor Active Shooter Detection Alarm

When seconds can save lives, unbeatable performance is no sales pitch. It's a requirement.

With Shooter Detection Systems you can rest easy with the knowledge that decades of gunshot detection experience goes into the design and delivery of each SDS gunshot detection system. Our strong partnerships with the industry's leading technology providers, performance certifications, and network of certified installers offer you a built-in support system you can trust. But don't take our word for it, contact us today for a school administrator or law enforcement customer reference and ask them why they chose Shooter Detection Systems for their school community.

Johnson Controls partners with leading brands to ensure our customers get best-in-class, integrated security solutions.

Only \$8,999

includes 5 Guardian Sensors, Labor and one year of inspections

K-12 Active Shooter Alarming System Highlights

- \$8,999 MSRP
